

# **SAMOA'S FINANCIAL INCLUSION REPORT**

---

June 2018

Prepared by Financial System Development Department

## Acknowledgements

This report would not have been possible without the continuous cooperation of financial institutions in the country with providing financial inclusion and financial access data. The following people are acknowledged for their valuable contribution: Malialosa Iosefa-Tofaeono, and Leonie Papu of ANZ Bank (Samoa) Limited; Shirley Greed, Fofoa Leavai and Darlene Savai'inaea of Bank of South Pacific (Samoa) Limited; Rapi Vaai of National Bank of Samoa Limited; Patrick Chan Cheuk of the Samoa Commercial Bank Limited and finally Fatuatia Taua'anae and Luisa Seilala Digicel Samoa Limited.

## Overview

The Central Bank of Samoa (CBS) is mandated to promote financial inclusion and financial literacy in Samoa under the CBS Act 2015. With the support of the Pacific Islands Regional Initiative (PIRI) of the Alliance for Financial Inclusion (AFI) and the Pacific Financial Inclusion Programme (PFIP), the CBS works to improve many facets of the financial system so that it is inclusive<sup>1</sup>. One area that is of great importance is financial inclusion data so that policy designs are based on evidence, from setting targets, identifying barriers, tracking national progress and assessing the effectiveness of the policy decisions.

The information and data provided below are obtained through information provided by local commercial banks and other financial institutions (the supply side data). Some data were also gathered from demand side surveys (DSS).

The Central Bank of Samoa presents its seventh semi-annual bulletins on financial inclusion data for the period as of 30<sup>th</sup> June 2018.

## Summary of Findings

### **1. There has been a decrease in 'Total Cash-in and Cash-out Access Points' in the Country mainly due to closure of inactive Mobile Money Agents.**

For the period under review, the number of bank branches have remained unchanged at 24, the number of ATMs have slightly increased to 65 (by 1.6%) and the number of EFTPOS have also increased to 548 (by 4.6%). However, the number 'Cash-in and cash-out agents' have slightly decreased to 81 (by -1.2%) and there is a significant reduction in the number of Mobile Money<sup>2</sup> agents by 58.3% (from 12 agents in December 2017 to only 5 in June 2018). This was a result of the removal of inactive agents during the period. Overall, the total cash-in and cash-out access points<sup>3</sup> (performs both functions) have decreased by 7.1% from 127 in December 2017 to 118 in June 2018. (Refer to table 1 and figure 1)

---

<sup>1</sup> The Central Bank of Samoa vision for an inclusive financial system is a sound financial system that best serves all members of society in their pursuit of economic prosperity through a state in which all people who can use them have effective access and satisfactory usage of a full suite of quality financial services from a range of service providers.

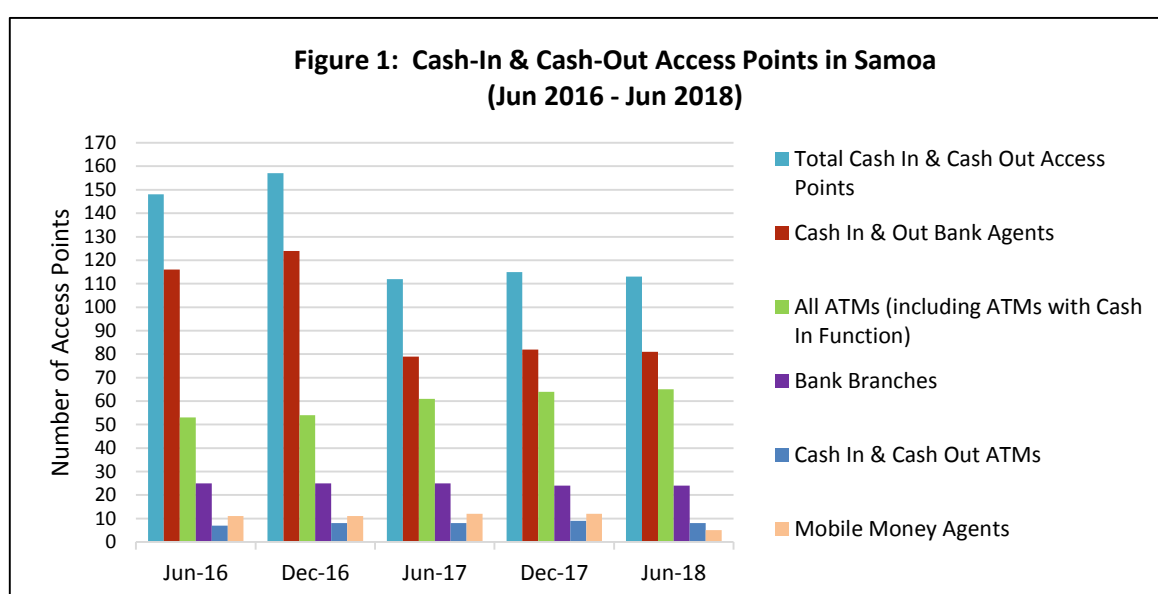

<sup>2</sup> A mobile financial service that is operated by Mobile Network Operators to facilitate

<sup>3</sup> Total of 'bank branches', 'Cash-in and Cash-out ATMs', 'Cash-in and Cash-out bank agents' and 'Mobile Money Agents'

When using the Financial Inclusion Indicators<sup>4</sup>, this is equivalent to having 0.96 cash-in and cash-out access point per 1000 adults<sup>5</sup> (refer to table 2). This is also equivalent to about one cash-in and cash-out access point to serve around three villages (with average number of 358 people per village<sup>6</sup>).

**Table 1: Number of Access Points for periods December 2017 and June 2018**

Financial Services Access Points	Dec 2017	Jun 2018	Variance	% change
Total All Cash-in & Cash-out Access Points	127	118	-9	-7.1%
Number of Bank Branches	24	24	0	0.0%
Number of ATMs	64	65	1	1.6%
Number of EFTPOS Outlets	524	548	24	4.6%
Number of Cash-in & Cash-out Agents	82	81	-1	-1.2%
Number of Mobile Money Agents	12	5	-7	-58.3%

**Table 2: Financial Inclusion Indicators for Samoa**

PIRI Financial Inclusion Indicators	Jun 2016	Dec 2016	Jun 2017	Dec 2017	Jun 2018
Adult Population (15+ years) <sup>7</sup>	121,142	121,142	122,177	122,177	123,212
No. of cash-in & cash-out access points per 1000 adults	1.31	1.39	1.01	1.04	0.96
No. of branches per 1000 adults	0.21	0.21	0.20	0.19	0.19
No. of all ATMs per 1000 adults	0.44	0.45	0.50	0.52	0.53
No. of Cash-In & Cash-Out Bank Agents per 1000 adults	0.96	1.02	0.65	0.67	0.66

Note: For full suite of PIRI FI Indicators, go to Annex 2 on pages 7 - 12

<sup>4</sup> Refer to Annex 2 on pages 6-11

<sup>5</sup> Adults are people with 15+ years.

<sup>6</sup> Source: Samoa Bureau of Statistics: Samoa Population and Housing Census 2016; <http://www.sbs.gov.ws>

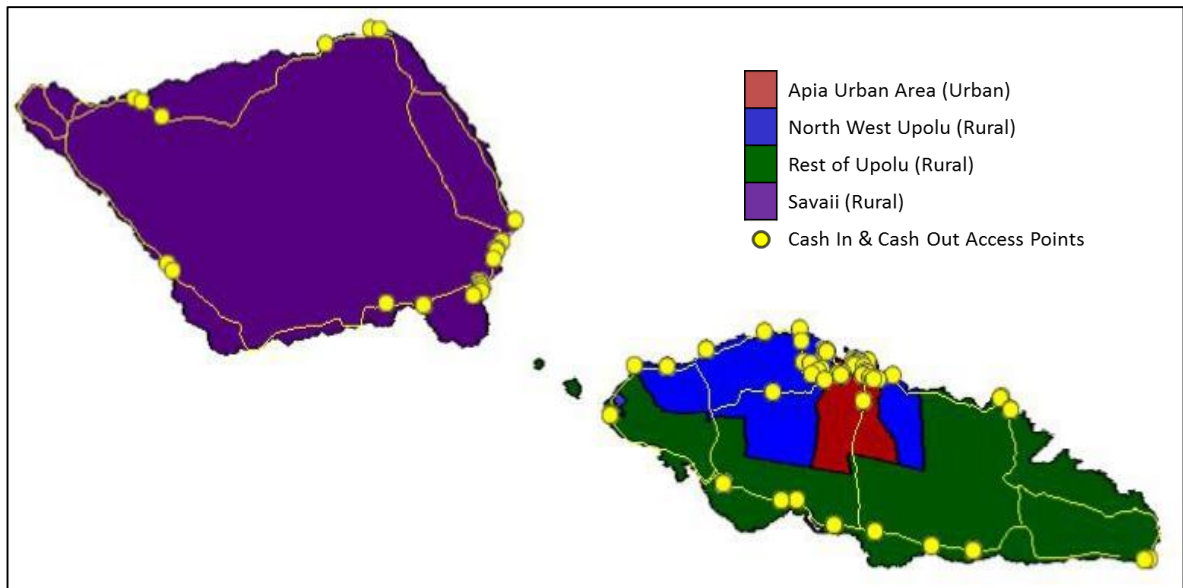

<sup>7</sup> Source: Samoa Bureau of Statistics: Samoa Population and Housing Census 2016; <http://www.sbs.gov.ws>: For 2016; Actuals from Population and Housing Census Analytical Report, 2016 (total adult population of 15+ years); for 2017 onwards; Estimates from Population and Housing Census Analytical Report, 2016 (total adult population of 15+ years is based on annual growth rate of 0.85 percent)

**2. Access points in Samoa remains concentrated in the Urban Area.**

For the current period, cash-in and cash-out access points in Apia Urban Area (AUA)<sup>8</sup> remains at 37%, North West Upolu (NWU) at 23%, Rest of Upolu (ROU) at 17% and 23% in Savaii (SAV). (Refer to Figure 3 & 4)

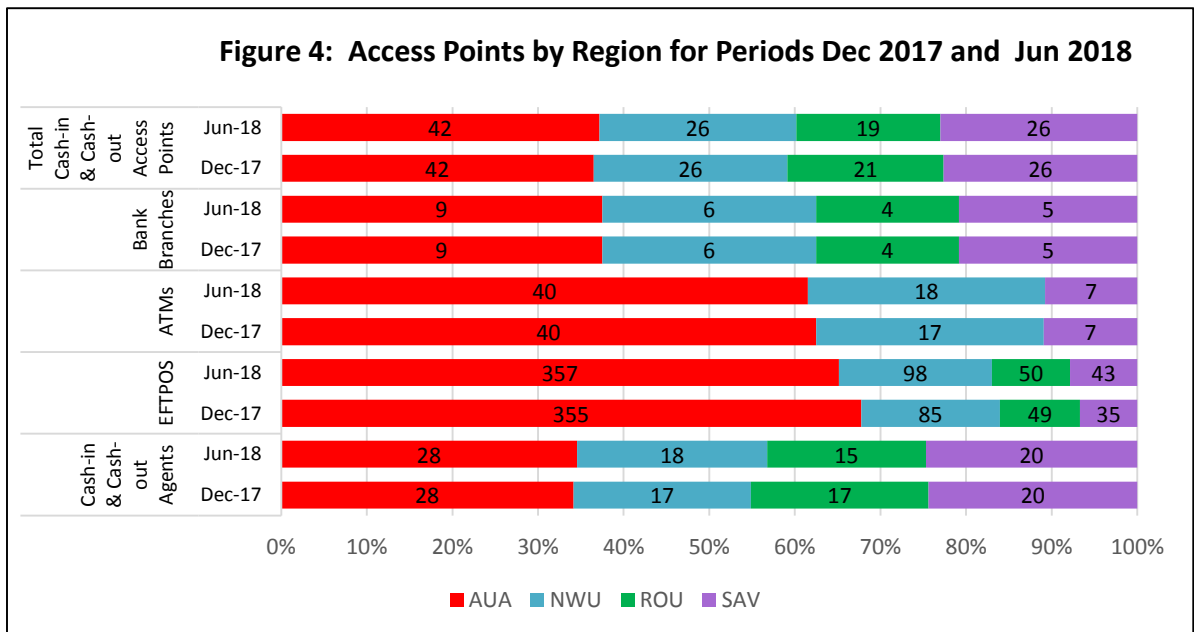

There remains significant amounts of ATMs and EFTPOS outlets located in the AUA region with 62% and 65% respectively. Furthermore, there are no ATMs located in the ROU region. (Refer to Figure 4)

**Figure 3: Map of Samoa: Cash-in & Cash-out Access Points per region as of 30<sup>th</sup> June 2018**

Note: For more Financial Inclusion Access Points mapping, go the annex 3 on pages 13 & 14

**Figure 4: Access Points by Region for Periods Dec 2017 and Jun 2018**

<sup>8</sup> The regions are divided based on Samoa Bureau of Statistics reports. AUA region is the urban area and all the other regions; NWU, ROU and Savaii are regarded as rural areas. Source: Samoa Bureau of Statistics: Samoa Population and Housing Census 2016; <http://www.sbs.gov.ws>

Using the PIRI indicators, the AUA region has the highest number of cash-in and cash-out points per 1000 adults with 1.70 while NWU region has the least with 0.59 cash-in and cash-out access point serving 1000 adults. (Refer to table 3)

**Table 3: PIRI Financial Inclusion Indicators per Region for period June 2018**

<b>PIRI Financial Inclusion Indicators</b>	<b>AUA</b>	<b>NWU</b>	<b>ROU</b>	<b>SAV</b>
Adult Population (15+ years)	24,685	43,828	28,065	26,634
No. of cash-in & cash-out access points per 1000 adults	1.70	0.59	0.68	0.98
No. of branches per 1000 adults	0.36	0.14	0.14	0.19
No. of all ATMs per 1000 adults	1.62	0.41	0.00	0.26
No. of EFTPOS outlets per 1000 adults	14.46	2.24	1.78	1.61
No. of Cash-In & Cash-Out Bank Agents per 1000 adults	1.13	0.41	0.53	0.75

# Annex 1

## Definition Notes for the Measurement Framework

**Access points** are defined as regulated cash-in and cash-out points. This includes traditional bank branches, cash-in and cash-out ATMs, cash-in and cash-out bank agents and mobile financial service cash-in and cash-out points, and other offices of regulated entities (such as MFIs) that perform cash in and cash out functions.

**Active** - a financial product is understood to be active if it has been used in the past 90 days.

**Adults** refer to the population aged 15 years and older.

**Agent** - any third party acting on behalf of a bank or other financial services provider (including an e-money issuer or distributor) to deal directly with customers. This includes retailers that perform mobile financial services and cash-in and cash-out services.

**ATM (Automatic Teller Machine)** - An electronic banking outlet that allows customers to complete basic transactions without the aid of a branch representative or teller. There are two primary types of automated teller machines, or ATMs. The basic units allow the customer to only withdraw cash and receive a report of the account's balance. The more complex machines will accept deposits, facilitate credit card payments and report account information.

A **bank branch** is a retail location different than a bank's corporate office where a financial institution offers face-to-face and automated services.

**Cash-in (or Cash deposit)** is the exchange of cash for electronic value.

**Cash-out (or Cash withdrawal)** is the exchange of electronic value for cash.

**Document**— in this case we refer to the identification documents that are required to open an account, and not the forms that must be filled out. In the Pacific, this often includes a driver's license, passport, or birth certificate, among other documents.

**E-money** (also called mobile money) — A type of monetary value electronically recorded and generally understood to have the following attributes: (i) issued upon receipt of funds in an amount no lesser in value than the value of the e-money issued; (ii) stored on an electronic device (e.g. a chip, prepaid card, mobile phone, or computer system); (iii) accepted as a means of payment by parties other than the issuer; and (iv) convertible into cash. This does not include the transfer of airtime.

**EFTPOS access point** is an access point possessing a terminal which captures payment information by electronic means using a card-reading electronic point of sale device. Payments and withdrawals of cash by means of payment cards can be done at these electronic payment terminals in shops, for example.

**Mobile banking** is the use of a mobile phone to access banking services and execute financial transactions. This covers both transactional and non-transactional services, such as viewing financial information on a bank customer's mobile phone.

**Mobile financial services (MFS)** is the use of a mobile phone to access financial services and execute financial transactions. This includes both transactional and non-transactional services, such as viewing financial information on a user's mobile phone.

**Mobile financial services account** is the storage of e-money linked to a mobile account and a bank account. This is the account in a bank-led model of mobile financial services.

**Mobile financial services access points**— access points that also allow for cash in and cash out of mobile money into and out of mobile wallets or a MFS accounts. This is a subset of all access points.

**Mobile payment**— a payment with electronic funds transfer that is made with a mobile phone.

**Mobile wallet**— the storage of e-money that can be loaded or cashed out, but that can be held only in a mobile linked account and not customer bank account. This is the account in a mobile network operator (MNO)-led model of mobile financial services.

A **regulated deposit** or **credit** account is an account held by a regulated entity.

## Annex 2

### FINANCIAL INCLUSION INDICATORS

The Central Bank of Samoa has adapted the PIRI Financial Inclusion Measurement Framework as the basis for financial inclusion measurement in the country. The measurement framework takes the AFI Core Set<sup>9</sup> of Indicators as the foundation and builds into it, indicators that measure the topics of policy relevance and interest to the region and country specifics. And importantly, the indicators reflect member country's Maya Declaration<sup>10</sup> Commitments, so that countries can measure progress against their commitments.

#### Key dimensions of the Measurement Framework: Access and Usage

The PIRI core set of financial inclusion indicators addresses the three basic dimensions of financial inclusion: access, usage and quality of financial services. "Access" refers to the ability to use the services and products offered by formal financial institutions. "Usage" refers to the depth or extent of financial services and product use. Determining usage requires gathering details about the regularity, frequency and duration of use over time. Data on these dimensions is usually obtained through information provided by local commercial banks and other financial institutions, the supply side. Some elements of usage are gathered from demand side surveys (DSS) too.

The quality dimension, while important, is a more complex topic both conceptually and in terms of measurement, typically requiring DSS and the use of qualitative indicators. The Central Bank has yet to track and monitor the qualitative use of financial services.

The indicators as of June 2017 are shown in Table 3 below<sup>11</sup>. Note that this is not the complete measurement framework rather the only available indicators that can be informed to date from supply side and demand side data.

---

<sup>9</sup> The AFI Core Set of Indicators was compiled by the AFI Financial Inclusion Data Working Group (FIDWG) for AFI member countries to report on. It is a limited set of quantitative indicators that captures the status of financial inclusion in a country. The indicators are meant to measure the most basic and fundamental aspects of financial inclusion in a way that is as standardised as possible while remaining relevant to individual countries.

<sup>10</sup> The Maya Declaration was created at the 2011 AFI Global Policy Forum held in Mexico. Under the Maya Declaration platform AFI member countries voluntarily make commitments to promote financial inclusion and these commitments vary by scale and policy solution. They are defined and driven by AFI members themselves, which provides a unique and powerful incentive to meet their targets.

<sup>11</sup> The indicators for previous bi-annual report of June 2016 are also shown in Table 1 for comparison.

## AFI/PIRI Financial Inclusion Indicators for Samoa

Financial Inclusion Indicators	Jun-2016	Dec-2016	Jun-2017	Dec-2017	Jun-2018	Indicator
