

PRICE DEVELOPMENTS REPORT FEBRUARY 2026

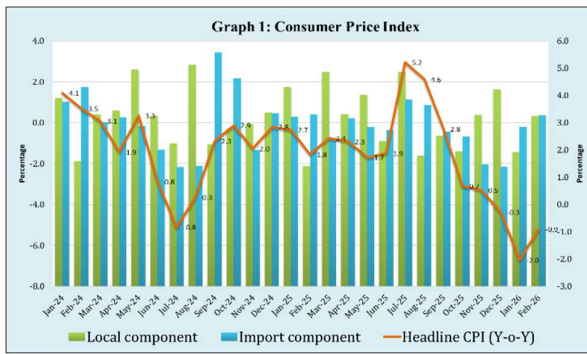

This report is prepared on a monthly basis using monthly Consumer Price Index (CPI) data from the Samoa Bureau of Statistics.

Report No.8: 2025/2026

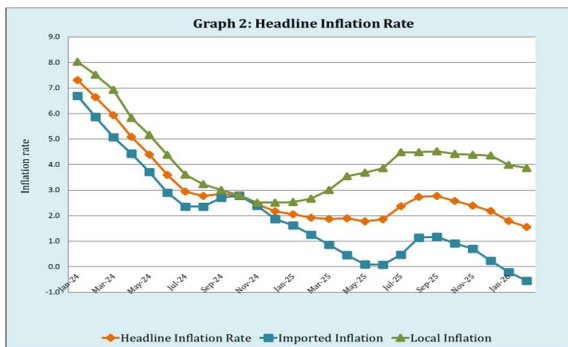

February 2026

1. Headline CPI and Inflation

The **Consumer Price Index (CPI)** rose by 0.3 percent over the previous month but was 0.9 percent lower than its level in February 2025. The month-on-month increase reflected a 0.3 percent hike in both its local and imported components. (See Graph 1).

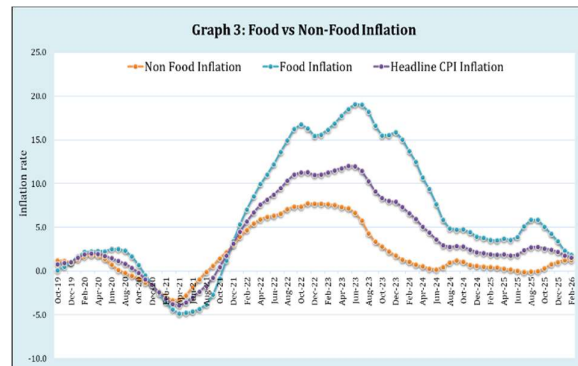

However, the **annual average inflation rate** dropped further to 1.6 percent in February 2026 from 1.8 percent in the previous month and 1.9 percent recorded in February 2025. Moreover, the current inflation rate was also below its forecast of 2.4 percent. The slowdown in the inflation rate was mainly driven by a deflation¹ of -0.5 percent in imported inflation, from 0.2 percent in the previous month. In addition, domestic inflation fell to 3.9 percent in February 2026 from 4.0 percent in the previous month. (See Graph 2).

1.1 Headline Food vs Non-Food Inflation

This section decomposes the headline CPI in terms of its Food and Non-Food inflation components. Food makes up 40.4 percent of the total CPI basket while Non-Food is around 59.6 percent. Historically, the predominant driver in Samoa's CPI inflationary trend is food inflation, with some periods influenced by non-food inflation (which includes fuel prices).

The monthly Food Price Index grew by 1.3 percent over the previous month but was 2.7 percent lower than in the same month last year. However, the **annual average food inflation rate declined to 1.9 percent from 2.3 percent** in the previous month and 3.6 percent in February 2025. The monthly increase mainly reflected a significant expansion in local food prices as well as imported food commodities such as chicken, rice, flour, pork and apple to name a few. (See Graph 3).

The Non-Food Price Index fell by 0.5 percent from the previous month but was 0.8 percent higher than a year earlier. Consequently, the **annual average non-food inflation fell slightly to 1.2 percent** in February 2026 from 1.3 percent in the prior month but well above 0.5 percent in February 2025.

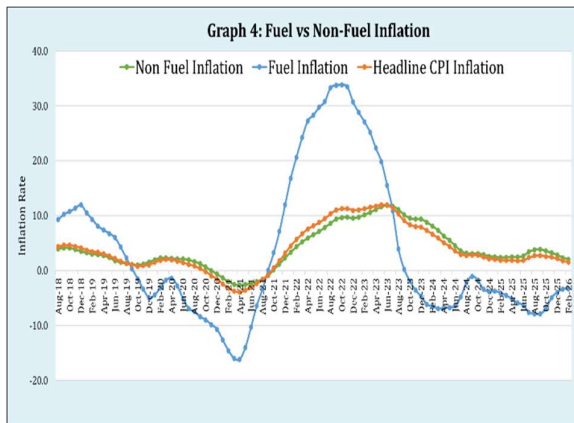

¹ Deflation is when the inflation rate is negative meaning average prices are actually lower than the comparative period.

1.2 Headline Fuel² vs Non-Fuel Inflation

This section breaks down the headline CPI in terms of fuel and non-fuel inflation. Fuel makes up 6.6 percent of the total CPI basket while non-fuel is around 93.4 percent. Historically, the predominant driver in Samoa's CPI inflationary trend is non-fuel inflation given its much larger weight.

The Fuel Price Index declined by 2.3 percent when compared to both its level in January 2026 and February 2025. As a result, the **annual average fuel inflation** rose to -3.3 percent³ from -3.4 percent in the previous month and -4.1 percent recorded a year earlier.

The Non-Fuel Price Index edged up by 0.5 percent from previous month but was 0.8 percent lower than in February 2025. However, the **annual average non-fuel inflation rate slowed to 2.1 percent** from 2.3 percent in the previous month and 2.4 percent a year earlier. The monthly increase was largely driven by higher prices for 'Food and Non-Alcoholic Beverages' sub-group. (See Graph 4)

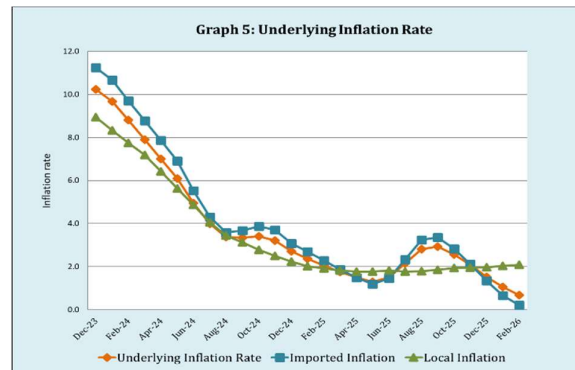

² Fuel includes unleaded petrol, diesel, gas and kerosene prices.

³ Deflation is when the inflation rate is negative meaning prices are actually lower than the comparative period.

2. Underlying CPI and Inflation

The **Underlying CPI⁴** rebounded by 0.7 percent in February 2026 but was 3.6 percent lower than its level in February 2025. Nevertheless, the **annual average underlying inflation rate** slowed to 0.7 percent, from 1.1 percent in the previous month and 2.1 percent a year earlier. This was also below its forecast of 2.2 percent for February 2026. (See Graph 5)

2.1 Underlying Food vs Non-Food Inflation.

The underlying food inflation **fell to 0.2 percent** from 0.6 percent in the previous month and 2.3 percent recorded a year earlier. Also, the **annual average underlying non-food inflation decreased to 1.6 percent** from 1.9 percent.

CENTRAL BANK OF SAMOA
09th April 2026

⁴ Underlying CPI takes into account the effects of both external and local pressure on prices for commodities that are not subject to extreme volatility and price regulations.
